

Success Story
AL Logistik

Full commitment in logistics. Electronic object management ensures smooth shift changes.

Introduction - our client:

With its 45 trucks, Al Logistik GmbH is the link between industrial companies, producers and trade. Through precise pick-ups and deliveries, they ensure a smooth flow in daily business life.

The approximately 200 employees - consisting of dispatchers, drivers, office staff, mechanics and warehouse workers - always have the highest possible added value towards their customers as their goal. In order to provide the best possible service, all transport tasks are carried out with our own vehicles that comply with the latest environmental regulations.

24/7

Available

The challenge:

At AL Logistik, different occupational groups such as warehouse workers, order pickers and the night shift need access to their tablets at different times. In the past, these were often left in lockers, offices or similar places, resulting in time-consuming searches. Since the individual groups rarely see each other, it was difficult to coordinate their activities.

Accordingly, AL Logistik was looking for a way to manage its tablets in a centrally organised and comprehensible way. Due to the shift work, round-the-clock availability had to be ensured. The tablets should also be able to be recharged during storage to ensure full readiness for use each shift.

Furthermore, it had to be possible to securely store customer keys that were kept on site. Access control was particularly relevant here, as only authorised persons should have access to the individual keys.

Our solution:

An ecos locker system with 42 1Mx1/3 and 6 1Mx2/3 lockers in combination with two M Premium key cabinets was able to meet all requirements.

The intelligent assignment of rights controlled by our ecos webman software enables AL Logistik to easily create individual access rights and times for the individual user groups. The automatic issue of all objects also guarantees 24/7 availability of all valuables.

An important advantage is the integrated charging function of the individual lockers. This allows the tablets to be charged during their rest periods in the locker system and is always available to the employees at the start of their shift, fully ready for use.

Thanks to the electronic system, AL Logistik now also has traceability of all object movements. Administrators can quickly see who took out which work material at what time. Even in the case of a forgotten return, missing tablets can be found quickly and assigned to the corresponding employee.

„ We have been looking for a suitable solution for a very long time. Before we installed their system, the keys were freely accessible to every employee. Since we also keep the customer keys from the customers we supply, this was no suitable long-term situation.“

Dietmar Kalbrecht
Managing Director

Full commitment in logistics. Electronic object management ensures smooth shift changes.

The result:

Thanks to electronic object management, all AL Logistik tablets and keys can now be kept safe and secure. Now only those employees have access to work materials who need them at the time. Thanks to the efficient administration, the time spent looking for lost tablets has been reduced to a minimum.

Building on its success so far, the company plans to expand its systems in the future: For the drivers of the trucks, an additional driver's licence check is to be integrated into the system for authentication. This will ensure that only persons who are fit to drive have access to the necessary keys and tablets.

„ The use of the systems is very well accepted by the staff. Thanks to the ease of use, even by older and/or non-tech-savvy employees “

Dietmar Kalbrecht
Managing Director
